

ClauseGuard – Contract Clause Risk Scanner

MicroSaaS Build Blueprint (Vibe Coding Ready)

1. Product Overview

Product Name: ClauseGuard (working name)

One-liner: Spot risky contract clauses in 60 seconds. No legal jargon.

Problem:

SMBs, founders, agencies, and freelancers regularly sign contracts they do not fully understand. Legal reviews are slow, expensive, and often skipped—leading to financial and legal risk.

Solution:

ClauseGuard highlights only *high-risk clauses* in a contract and explains them in plain English, without pretending to replace a lawyer.

2. Target Market & ICP

Primary Customers

- SMB founders
- Digital agencies
- Freelancers & consultants
- Startup operators

Geography

- United States
- European Union (Germany, Netherlands, France, Nordics)
- United Arab Emirates

Trigger Moment

User has just received a contract and is expected to sign it quickly.

3. Core Value Proposition

Not “AI legal analysis”

But:

> “We highlight clauses that could hurt you — and explain why, in plain English.”

Key drivers:

- Fear-driven urgency
- Speed (results in < 1 minute)
- Simplicity (red flags only)

4. MVP Scope (Do NOT Overbuild)

4.1 Contract Upload

- PDF and DOCX support
- File size limit (e.g., 10 MB)
- English only (v1)

4.2 Clause Detection Engine

Only detect and analyze **high-risk clauses**:

- Termination
- Liability limitation
- Indemnity
- Auto-renewal
- Payment penalties
- Governing law & jurisdiction
- Intellectual property ownership
- Non-compete / exclusivity

4.3 Risk Output UI

For each flagged clause:

- Risk level: Low / Medium / High
- Plain-English explanation
- “Why this matters” section

4.4 Jurisdiction Selector

User selects:

- US
- EU

- UAE

Used to slightly adjust wording and risk interpretation (NOT legal advice).

4.5 Legal Disclaimer

Highly visible disclaimer:

“This tool provides information only and does not constitute legal advice.”

5. Clause Analysis Logic

1. Extract text from document
2. Split document into clauses (rule-based + AI)
3. For each clause:
 - Identify clause type
 - Determine if risky (Yes / No)
 - Assign risk level
 - Generate explanation
4. Return **only risky clauses**

This keeps results short, cheap, and high-value.

6. Technology Stack

Frontend

- Next.js / React
- Tailwind CSS
- Simple file upload + results UI

Backend

- Node.js or Python
- PDF parsing: pdfplumber / unstructured
- DOCX parsing: python-docx

AI Layer

- OpenAI or Claude
- Low temperature, deterministic prompts
- One prompt per clause

Infrastructure

- Supabase (auth, database)
- Stripe (payments)
- Vercel / Render (hosting)

7. AI Prompting Strategy (High Level)

System prompt goals:

- Classify clause type
- Detect risk
- Explain in plain English
- Avoid legal advice tone
- Be conservative and clear

Return JSON only.

8. Pricing Strategy

Phase 1 (Launch)

- \$10 per contract
- No signup required before upload
- Email required to receive full report

Phase 2 (After Validation)

- \$29/month → 5 contracts
- \$79/month → unlimited contracts

9. 7-Day Build Plan

Day 1

- Landing page
- Stripe payment setup
- Upload UI

Day 2

- Document parsing
- Clause splitting logic

****Day 3****

- AI clause classification
- Risk scoring

****Day 4****

- Explanation generation
- Jurisdiction toggle

****Day 5****

- UI polish
- Error handling
- Disclaimer + legal pages

****Day 6****

- Payment gating
- Email delivery
- Logging

****Day 7****

- Real contract testing
- Fix hallucinations
- Deploy

10. Go-To-Market (First 50 Users)

Channels

- Founder & freelancer communities
- Indie Hacker forums
- LinkedIn (search posts about contracts)

Hook

"Before you sign that contract, scan it for red flags in 60 seconds."

11. Defensibility & Expansion

Short-Term

- Jurisdiction tuning
- Clause library improvements
- Better explanations

Long-Term

- Clause comparison (before/after)
- AI redline suggestions
- Team dashboards
- Expansion into compliance tools (GDPR / AI Act)

12. Success Metrics

- Time to value < 60 seconds
- Conversion rate (upload → pay)
- Repeat usage
- Cost per analysis

13. Key Principles

- Simplicity beats completeness
- Red flags > full analysis
- Fear-driven UX converts
- Disclaimer everywhere
